Indirect Illuminated Panel Luminaire

Section, with its special design featuring indirect lighting, creates a soft, balanced, and eye-friendly lighting atmosphere in spaces. The central metal sheet surface reflects the light from the LED modules positioned below, directing it through the side openings to the ceiling and creating a homogeneous illumination throughout the space.

Offering high visual comfort thanks to the absence of a visible direct light source, Section is an ideal solution for workspaces, educational buildings, healthcare facilities, and social areas. Its recessed mounting structure and simple design language integrate seamlessly with the ceiling, combining aesthetics and functionality in modern architectural projects.
