Decorative Wall Sconce

Vera is a wall-mounted sconce solution that offers aesthetic lighting in interior spaces with its curved form and decorative surface structure. Thanks to its perforated sheet metal front surface and opal lens structure, it softens the light and creates a homogeneous distribution.

One of its striking features is that it creates decorative lighting effects on the wall by providing light output from both sides of the body. The illumination effect created from the sides along with the light emitted from the front surface adds depth and architectural character to the space. With its 210° wide light distribution, it offers an effective solution for corridors, hotels, offices, residential projects, social areas, and common areas.
