Homogeneous General Lighting, Acoustic Comfort

Skate-DM is a hybrid solution that combines sound-absorbing acoustic felt panels with linear lighting featuring an opal diffuser in a single product. The opal diffuser, providing wide light distribution, creates homogeneous and comfortable general lighting in the space, while two integrated spotlights offer accent lighting where needed.

The acoustic felt panel improves sound quality in working environments by reducing echo, and adapts to architecture thanks to different felt colors and customizable panel sizes. It combines acoustic treatment, general lighting, and accent lighting in a single product for offices, meeting rooms, training areas, and social living spaces.
