

LINEAR-End Cap

72430

A Safe and Aesthetic Complement to the System

The Linear Termination Cap is designed to provide a safe and aesthetically pleasing termination at the ends of trunking lighting systems. Its PC injection molded structure ensures durable use while completing the system's integrity by covering the open ends of the energy carrier profile.

Its easy-to-assemble design speeds up the installation process and provides a clean finish to the trunking line. It is a complementary accessory that ensures a safe, organized, and professional-looking completion of trunking lighting systems.
